

# Scouler's St. Johnswort

## *Hypericum scouleri*

**Description:** Low spreading to trailing plant, growing only 4-6 in. tall. Oblong leaves are paired along the stem. Red-orange buds open to bright yellow 1 in. flowers growing in clusters atop the stem. Blooms in summer.

**Habitat:** Found in moist, open meadows and along stream banks, usually at high elevation.

**Landscape Uses:** Plant in meadows and moist areas. Sun to part shade. Will grow amongst rocks in a rock garden if provided with ample moisture.

**Note:** Not to be confused with the non-native St. Johnswort, *Hypericum perforatum*, or goatweed.
